

Application

Combined Tension and Compression Universal Testing System

Specially Designed for
Alternating Testing of

- Reinforcing Steel Bars and
 - Concrete Cubes or Cylinders
- in accordance with relevant
international standards.

System Consisting of:

- Universal Testing Machine Type TTM® - S 300 kN with hydraulic operated grips
- Compression Load Frame C 2000 kN
- 19" Control Console with integrated hydraulic power pack, digital controller, computer etc.
- Digital Controller and **DION** application software for alternating testing
- Clip-on Extensometer for reinforcing steel bars
